</w:t>

Declines in both specific and non-specific immunity have been reported in association with under-nutrition and protein deficiency.

Furthermore, some polyunsaturated fatty acids (PUFA), as well as their metabolic derivatives, contribute to regulating cell functions, especially omega-3 fatty acids (EPA and DHA) that influence immune cell functions

re units (ICU) should be early assessed for nutritional risk

. Therefore, an early enteral nutritional support should commence within 24 to 48 hours.

Post-pyloric feeding will be favored when aspiration risk is high, age > 70 years, consciousness level affected, prone position, gastroesophageal reflux and a single load of enteral nutrition

Q: Can the coronavirus be spread through food, including refrigerated or frozen food?

According to the CDC

to the CDC

“Coronaviruses are generally thought to be spread from person-to-person through respiratory droplets. Currently there is no evidence to support transmission of COVID-19 associated with food.”

A: We are not aware of any reports at this time of human illnesses that suggest COVID-19 can be transmitted by food or food packaging. However, it is always important to follow

good hygiene practices

(i.e., wash hands and surfaces often, separate raw meat from other foods, cook to the right temperature, and refrigerate foods promptly) when handling or preparing foods.

Q: Are meat products compromised by the Coronavirus?
